Ness LLC Proposal for: 2694 W. Wave Ct. Meridian, Idaho

August 30, 2019

What to expect with a Drain Install????

- ✓ Access is key! We will need admission Monday through Friday, 8 am - 5 pm while the project is in progress. Ness is bonded and insured. It is not necessary for a home owner to be present while the work is being done. Please make sure we have a house key or garage code for entry. **The easier the access is for our technicians, the faster the job goes!**

- ✓ All access to the crawlspace will be protected by plastic sheeting during work.

- ✓ Installing a drain system is a 10-17 day process, depending on drying time. Please plan accordingly.

- ✓ The AC will need to be shut off during treatment for mold and will need to be off for at least 3 hours.

- ✓ Fans need time to dry the area. **We don't always schedule for consecutive days.** We try to give as much notice as possible but last minute schedule changes can and do occur.

- ✓ **Please note:** If a signed contract is returned within 24 hours, your estimated start date will be some time around Oct.12th. Please plan accordingly. If there are any cancellations, you will be moved up in the schedule and contacted for access.

- ✓ We have now extended our warranty for sump pump drainage systems to 10 years!

PROPOSED DRAINAGE AND REMEDIATION for the crawlspace at 2694 W. Wave Ct. Meridian, Idaho
Ness, LLC is an IICRC council certified Mold Remediation Contractor, licensed, bonded, and insured with mold and environmental pollution endorsements.

As requested, the crawl space was inspected for standing water. We observed standing water in various areas throughout the crawlspace and there is visible evidence of a history of water intrusion. Based on these observations, we would recommend installing a drain system with a sump pump. There did not appear to be any visible mold, but the view was limited due to standing water in some areas. If any microbial growth is discovered during the drain install the owner will be notified and a bid for remediation will be provided. We would also recommend replacing the vapor barrier. The wet insulation that has detached from the stem wall will be removed with the rest of the debris and old vapor barrier. It will not need replaced as there is sufficient insulation on the floor decking.

Part 1: Drainage (*Digline will be contacted to mark all utilities*)

1. All access to crawlspace surfaces will be protected by plastic sheeting during work.
2. Perform preliminary digging and pumping to remove excess water, as needed.
3. Set up negative air machine and additional fans, as needed, for dry down.
4. Clear all insulation and debris from foundation vents for air flow.

Part 2: Directions given facing the front door from outside.

1. Install a fabric lined graded drain system below the bottom of the footings along the entire interior perimeter of the crawlspace except for behind part of the garage.
2. Drain in crawlspace will collect into a sump tank located in the back-middle area of the crawlspace.

Part 3: Install sump pump with insulated lid in the back- middle area of the crawlspace. Sump will discharge through a drain line to a dispersal bed towards a landscaped area that will be determined onsite. (The sump pump discharge line will not be visible from the outside of the house. Installation of electrical outlet with audible alarm is included.)

Total Labor & Materials Parts: 1-3: \$4,620.12

Part 4: Remove and dispose of wet insulation, old vapor barrier, miscellaneous debris, and building materials. Install new 6 mil. vapor barrier in the entire crawlspace and pull up onto the footings, where possible.

Total Part 4: \$512.68

>> Paid out of closing if closing is within 21 days of job completion. Title Company contact information must be provided along with the signed proposal. Or 50% down and 50% paid upon completion <<
>> 3% charge on credit card transactions <<

Parts 1-3 Accepted by: _____ **Date** _____

Part 4 Accepted by: _____ **Date** _____

Please Indicate Payment Schedule: (check option) 50/50 Out of Closing
