Ness LLC Proposal for: 1191 E. Riversong Dr. Eagle, Idaho 83616

December 3, 2020

What to expect with a Drain Install and Remediation:

- ✓ Access is key! We will need admission Monday through Friday, 8 am - 5 pm while the project is in progress. Ness is bonded and insured. It is not necessary for a home owner to be present while the work is being done. Please make sure we have a house key or garage code for entry. The easier the access is for our technicians, the faster the job goes!

- ✓ All access to the crawlspace will be protected by plastic sheeting during work.

- ✓ Installing a drain system is a 14-21 day process, depending on drying time. The process CANNOT be rushed or our warranty may be compromised. Please plan accordingly.

- ✓ Mold remediation is usually a 7-14 day process, depending on dry times and 3rd party inspection scheduling.

- ✓ Fans need time to dry the area so we don't always schedule for consecutive days. We try to give as much notice as possible but last minute schedule changes can and do occur. Please direct all questions to ty@nessllc.com

- ✓ If a signed bid is returned in the next 24 hours, your estimated start date will be the sometime during the week of Dec. 7th. You will be sent a schedule for the week.

- ✓ We have now extended our warranty for sump pump drainage systems to 10 years!

PROPOSED WATER DRAINAGE for the crawlspace at 1191 E. Riversong Dr. Eagle, Idaho 83616
Ness, LLC is an IICRC council certified Mold Remediation Contractor, licensed, bonded, and insured with mold and environmental pollution endorsements

As requested, the crawl space was inspected for standing water and mold. We recommend installing a drain system based on the visual evidence that there is a history of water intrusion. There was also visible microbial growth on the floor decking and rim joist that will require remediation. The vapor barrier will need to be replaced after remediation. We will also re-connect the main duct that has come apart in the middle of the crawlspace. There was a foundation vent that is installed upside that we will repair. There is a condensation line that may be leaking and will need to be evaluated by a licensed plumber and the dryer vent that should be cleaned and evaluated by a HVAC professional.

Part 1: Drainage (Digline will be contacted to mark all utilities)

1. All access to crawlspace surfaces will be protected by plastic sheeting during work.
2. Preliminary digging and pumping to remove excess water, as needed.
3. Negative air machine used for the crawlspace during work and for dry down.
4. Additional fans will be installed for dry down, as needed.
5. Clear foundation vents of any insulation that may be blocking air flow.

Part 2:

1. Install a fabric lined graded drain system below the bottom of the footings on the entire perimeter of the crawlspace except for behind part of the garage and the far right side of the house.
2. Drain in crawlspace will collect into a sump tank. The sump tank will be in the middle of the left side of the crawlspace.

Part 3: Install sump pump into tank with insulated lid in the appropriate determined area. Sump will discharge through a drain line to a dispersal bed towards the front left landscaped area. (The sump pump discharge line will not be visible from the outside of the house. Installation of electrical outlet with audible alarm and manual shut-off included.)

Total Labor & Materials Parts 1-3 = \$4,860.38

Part 4: Mold Remediation

1. All access to the crawlspace will be protected during work.
2. Containment will be set at the crawlspace access.
3. The furnace system is to remain off during the work and for three hours after each treatment.
4. Hepa filtered negative air flow will be ongoing during the project
5. Remove any insulation from the area where work is to be performed.
6. Surface cleaning and abrasion removal, as needed and treat impacted rim joist and floor decking. **(See Part 5)**
7. Push back insulation where removed.
8. Clear all vents of any insulation or debris that may be obstructing air flow.

Part 5: Microbial Growth Remediation

After containment is set up, then perform surface cleaning and abrasive removal, as needed, of visible microbial growth on the impacted rim joist and floor decking. Once mold impacted surfaces are cleaned, then treat the remediated surfaces in the crawlspace with a non-toxic Microbial Growth Inhibitor. Procedures are established from IICRC S520 Standard and Reference Guide for Professional Mold Remediation. (2) All work in the crawlspace will be performed using accepted procedures. (3) Respiratory Protection is in accordance with the OSHA respiratory protection standard (29 CFR 1910.134) for the remediation. Gloves, full-face respirators, p-100 particulate filters, Tyvek full body suits with hoods and boots. Photo documentation of work performed is available at the end of the project upon prior request. Disposal of debris.

Total Labor & Materials Parts 4-5 = \$1,887.12 (This price only good if done with drain system)

Ness, LLC gives a **10-Year Warranty** on sump pump and no standing water (as per signed contract) on the crawlspace floor where drain was installed from ground water seepage and rain/snow. This warranty is *transferable* to new home buyer for 7 years. Drainage warranty excludes water standing on the crawlspace floor from unnatural resources, i.e.: interior home appliances, plumbing leaks, or irrigation mechanical failures. Furthermore, Ness, LLC is not responsible for any future landscape changes that may disrupt the system. **Work under this proposal is limited to the items listed. Any additional work will need to be outlined and set out by a separate contract, or have the contract amended and signed to reflect any additional work desired.**

Ness LLC gives a **5-year limited warranty** on no visible microbial re-growth where work is done. Warranty is **void** if any water or water source introduced into the area. After the treatment procedures, mold will not grow if there is no additional water source.
